RE: Jeff Nelson (10/10/1980, MR#: AB12345)

Date of Procedure: August 24, 2011

Dear Dr. Physician,

We had the pleasure of seeing your patient, Jeff Nelson, for Mohs micrographic surgery. As you recall, he is a very pleasant 30 year-old male with the following lesion(s):

Basal Cell CA - Medial Right Inferior Helix (0.0 x 0.0 cm).

The tumor was removed with the Mohs fresh-tissue technique requiring 2 stages to clear. The resulting defect measured 2.7 x 2 cm and extended down to the subcutis. The wound was reconstructed with a Simple Linear Closure.

The patient left the unit in good medical condition and was asked to see us for suture removal on Monday, August 29, 2011.

Basal Cell CA - Mid Parietal Scalp (0.0 x 0.0 cm).

The tumor was removed with the Mohs fresh-tissue technique requiring 2 stages to clear. The resulting defect measured 2.7 x 2.9 cm and extended down to the subcutis. The wound was reconstructed with a Simple Linear Closure.

The patient left the unit in good medical condition and was asked to see us for suture removal on Monday, August 29, 2011.

Thank you for referring Mr. Nelson and allowing us to participate in his care. If you have any questions or if we can be of further assistance, please contact us.

With warm regards,

John Gibosn
